

## OSINT

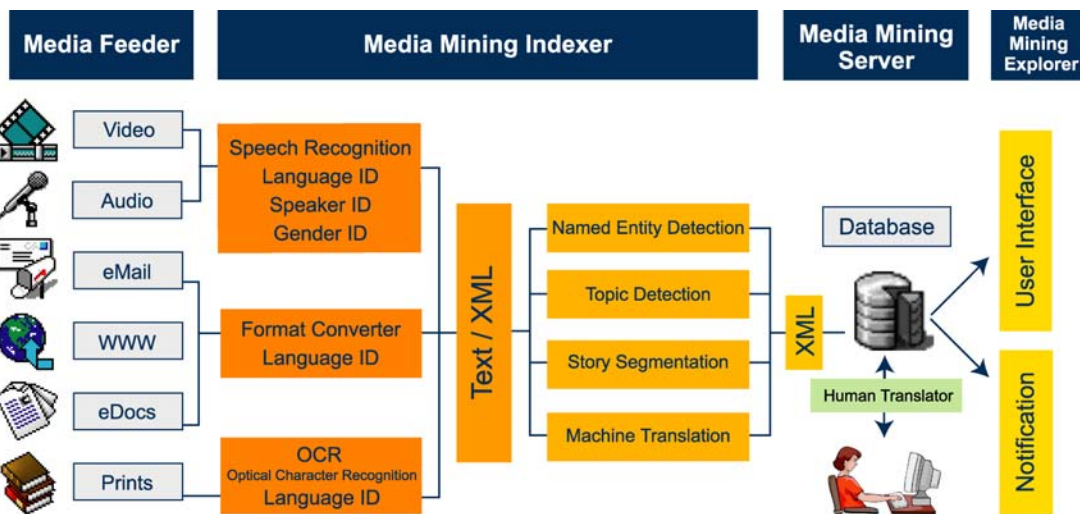

### Government Solutions for Open Source INTelligence

Open Source INTelligence, like all other intelligence sources, is more than information. It represents careful filtering, selecting, analyzing and presenting of all types of accessible, unclassified information on a timely basis.

Due to ever more comprehensive reporting in a wide array of different media, information volume during the last years has increased considerably and makes a purpose-driven and focussed information extraction indispensable.

However, the best intelligence in the world is useless if it cannot be delivered in a timely fashion, in a media compatible with the in-house systems and in a format that can be easily understood.

SAIL LABS Technology has developed a user-friendly content mining and indexing system that transforms unstructured data collections into actionable intelligence in real-time.

#### The SAIL LABS OSINT Solution allows you to manage input from various media:

- Audio (radio broadcast)
- Video (TV, web-broadcast, VCR, satellite)
- Electronic documents (eMail, PDF, Word, WWW)
- Written documents (prints, newspapers, magazines, fax)

In addition to its content mining capabilities the SAIL LABS OSINT Solution offers access to foreign language sources through automated, multi-lingual translation engines, and categorization and summarization tools for efficient filtering and compilation of reports.

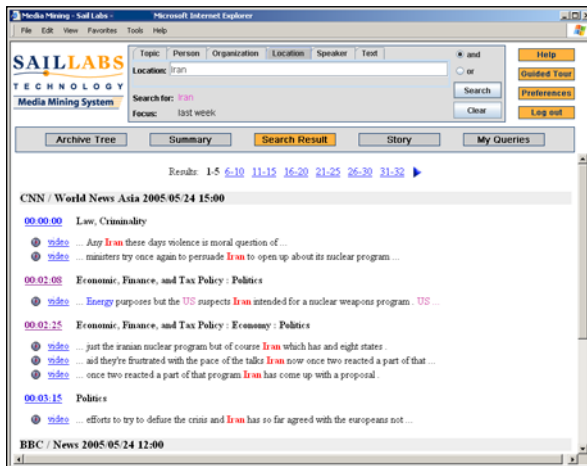

#### Currently available languages are:

- Arabic, English (UK & US), French, German, Spanish.
- Additional languages are available on request.

## Web-Based Thin Client

The data collections are accessed via the Media Mining Explorer, which enables users to search all documents in the database by keywords and key-phrases and to summarize reports by highlighting topic, person, organization, location or speaker.

## Automatic Notification

Personalized email or sms alerts notify the user whenever relevant information has been identified.

## Tools

Editing tools for human translators and personalization of reports are also available for key-projects.

## Benefits of the SAIL LABS OSINT Solution

- As individual and non-automatic information extraction, analysis and synthesis become increasingly more expensive to perform and manage, the fully automatic OSINT Solution saves time and cost in accessing and filtering relevant information for intelligence gathering in real-time.
- The OSINT Solution offers deliverables which permit the analyst or policymaker to "drill down" to original source documents if they wish.
- The underlying technology is scalable and supports single and multiple machine configurations.
- The SAIL LABS OSINT Solution is based on the award winning SAIL LABS Media Mining System, which can be easily integrated into other systems.

## Areas of Application

The SAIL LABS OSINT Solution can be used in many areas ranging from private businesses for pricing strategies, negotiation, managing resources, competitive and business intelligence to police, military and government organizations for actionable intelligence, situational awareness, situation room, crisis management and analysis of international media response.

### About SAIL LABS Technology

SAIL LABS Technology (from 'Speech Artificial Intelligence Language Laboratories') is one of the world's leading innovators in the field of 'Natural Language Understanding', creating high-end software for speech and multimedia analysis solutions.

SAIL LABS Technology addresses the high-value speech technology markets of media indexing, media mining and spoken dialogue systems. Together with a global network of partners, SAIL LABS provides comprehensive solutions for vertical markets. Continual innovation at the leading edge of linguistic and IT research drives SAIL LABS' vision of creating technologies that enable advanced language understanding capabilities.

## Automatic Transcription and Translation

The original text, audio and video files can be viewed and listened to while, simultaneously, a transcript of the original content and/or a keyword or full machine translation into the preferred language appears on the screen
