Products & Services

SAIL LABS is a full-range solution and service provider for software-based speech and language related requirements concerning broadcast news and spoken information processing.

We offer development and implementation of customized solutions, which help clients to achieve their strategic objectives.

Media Mining System

The SAIL LABS Media Mining System offers fully automated analysis and processing of video and audio data. The collected data is transcribed, translated, indexed and archived in real-time - all based on user configurable preferences like speaker identification, topic detection, keywords detection etc.

Text Mining System

The SAIL LABS Text Mining System offers fully automated analysis of electronic text documents, such as emails, PDF and web pages as well as hardcopy documents. Based on pre-configured user preferences the data is translated and classified by topics, keywords and key-phrases in real-time.

PodMining

SAIL LABS PodMining enables podcast search engines to deliver relevant search results from podcasts by transforming unstructured audio material into indexed and searchable information.

Markets

SAIL LABS solutions and services are used across a broad range of markets ranging from government and security agencies, media organizations, telecom and mobile communications to financial analysts and system integrators.
